N1 Disassembly tool (N1 Dismantling video ---

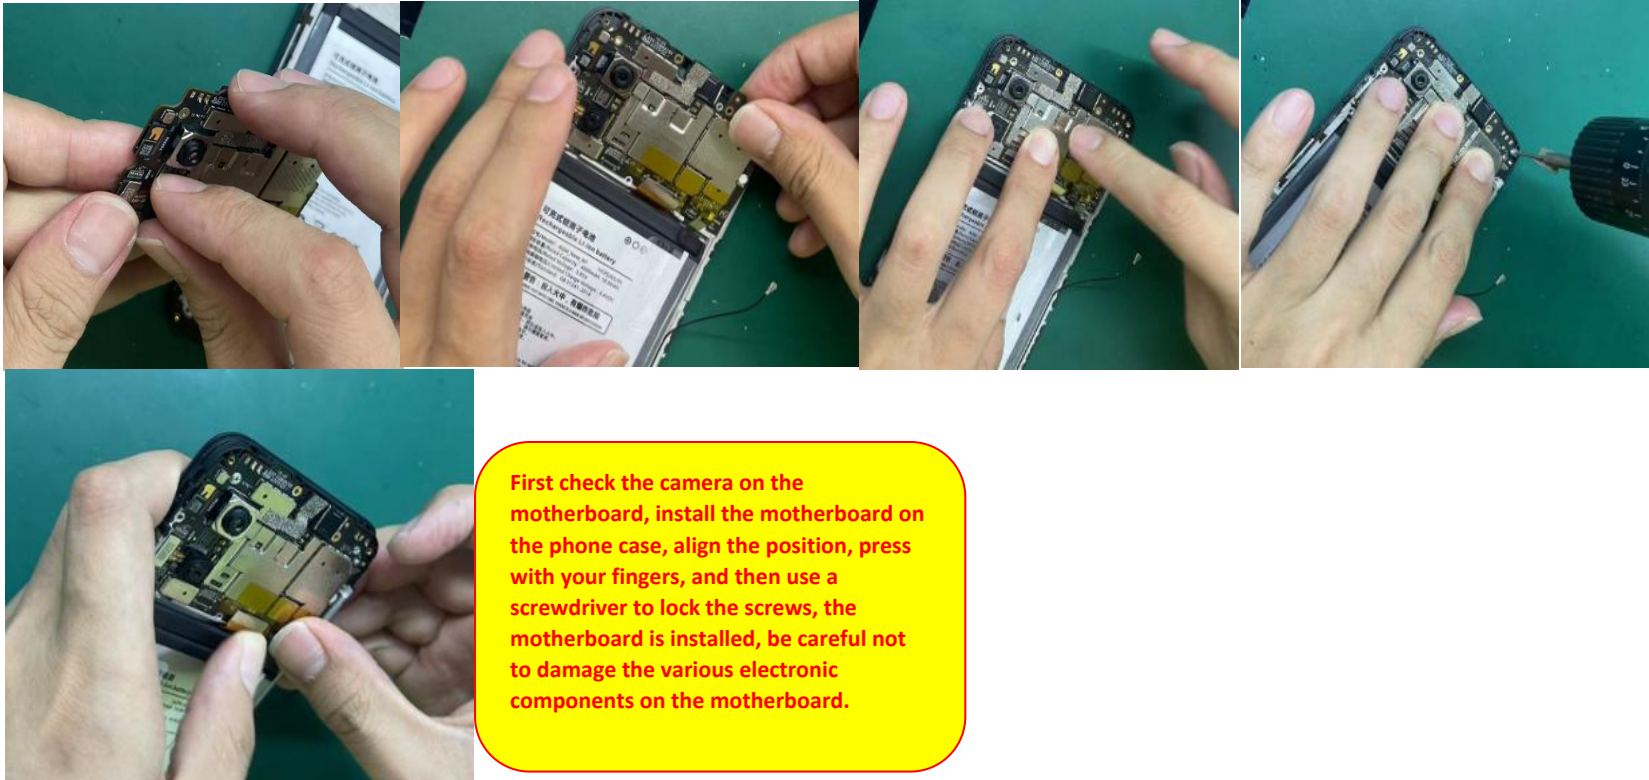

1 Battery mounting

Battery spare parts are sent from the factory. They are new. Tear the protective film directly on the old machine and stick the new battery in the right direction.

2 Motherboard installation

First check the camera on the motherboard, install the motherboard on the phone case, align the position, press with your fingers, and then use a screwdriver to lock the screws, the motherboard is installed, be careful not to damage the various electronic components on the motherboard.

3 Sub-small plate mounting 扭力0.9+-0.1kgf.cm Torque 0.9+-0.1kgf.cm

Check that the components above the sub-board cannot be damaged, install the sub-board in position, and lock the fixing screws.

4 Side key mounting

First, paste the heat insulation film, install the side key on the middle frame of the phone first, and then button the blue bottom shell, align it with the position, press the whole bottom shell with your fingers, and pay attention to pressing it firmly..

5 Mounting of fixed support

Install the upper and lower parts of the fixed brackets, and lock them

This battery cover plastic shell, AGM factory has spare parts, the new battery cover can be directly affixed.
